

## Reversing around a sharp corner.

- 1. Drive past the road on the left hand side and stop so that the corner you intend to reverse around is visible in your near side door mirror. Remember to stop parallel to, and around 12" ~ 18" away from the kerb.*
- 2. After observing all around reverse back until the sticker on the near side rear window arrives on the kerb.*
- 3. STOP and observe all around again, if it is safe, start to move the car backwards and steer fully to the left. Remember coordination of speed and steering is very important.*
- 4. As you reverse around the corner observe again about half way around. Shortly after observing the kerb will disappear from the n/s window. Start to glance into the n/s door mirror and as you see the kerb becoming parallel to the side of the car steer to the right until the car finishes parallel to the kerb around the same distance away as when you started.*
- 5. Go back until you are asked to stop.*
- 6. Make the car safe.....manoeuvre finished!*
- 7. Remember, observation needs to be behind 80% of the time, the other 20% is for the mirrors and observing around you. If you hear something stop and check!*
- 8. If at any time another vehicle approaches from behind always show willing to go forward and start the manoeuvre again.*
